

Graduate Web Developer

Paid Internship - Home Counties

Lion is a leading agency developing complex web-based apps for clients such as Longleat Safari Park, 18 Weeks E-Learning and ComXo.

Our clients apps use bleeding edge web-based technologies such as Ember.js. Lion Team Members have over 20 years of development experience at leading video games companies, and are active contributors to public development projects.

Our role is for a six month intern leading to full employment. This role will be working on a daily basis with various Ember.js apps, javascript, PHP, Expression Engine and Ruby on Rails.

We are looking for a graduate that has a solid foundation in computer science and/or programming. Whilst good knowledge of Javascript or PHP will help, we are confident that our sophisticated development environment and depth of experience amongst the rest of the team will quickly bring anyone with a good programming knowledge in other environments such as C# or C++ on board.

Our ideal candidate may have questions raised on StackOverflow, or have contributed to public repositories.

The role will have to undertake basic graphics manipulation (we use Sketch), but experience in graphic design is not required.

The role will also use key development tools such as git and npm and will be an active user of our project management system.

We feel that this is an ideal learning role for a graduate, who will be able to hone their skills in a professional development environment.

Lion HQ is based in the centre of Windsor.

We offer an intern payment of £15k per annum, and expect work of 40 hours a week.
